**MAXAM**  
MOWERS

**30** years

Thousands of farms in New Zealand have improved their pastures through the use of a Maxam Mower. They are multipurpose mowers, designed to do all the mowing and topping on your farm.

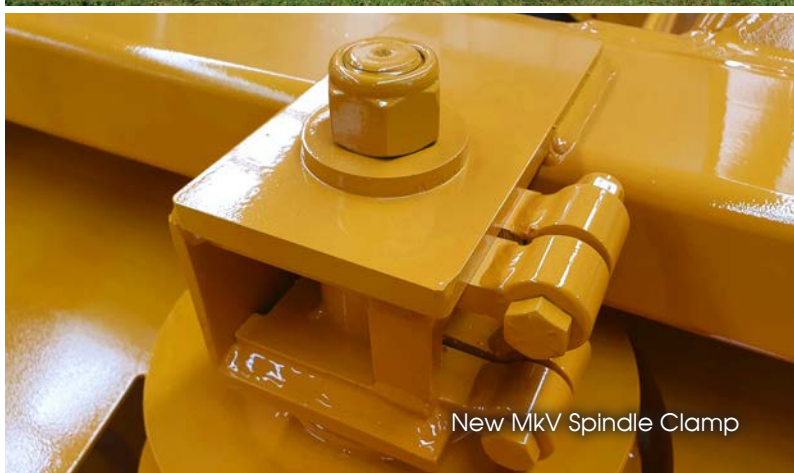

This unique piece of equipment can handle all farm mowing tasks. It has the mowing capabilities of a disc mower, the convenience of a topper and the spreading capabilities of a tedder.

## Maxam mowers are tough

- With their robust construction and world class finish, Maxam Mowers are durable and this ensures a long life.
- The Maxam heavy duty belt drive absorbs shock loads and the sealed bearings keep them simple and resilient. Also, if there isn't enough sward to keep the bar cool they don't overheat like a disc mower can.
- There isn't much downtime as it is limited to greasing the driveshaft and occasionally changing the blades.
- Maxam Mowers can handle the knocks of everyday farm mowing, year after year. This includes mowing rushes and other difficult nuisance growths.

## Maxam mowers are user-friendly

- They are quick and easy to attach and remove from the tractor. This enables you to take it off quickly and easily when it is not required.
- As a Maxam Mower is mounted close to the linkage, smaller tractors can handle the weight. They are also compact, meaning they are easy to transport and drive around the farm.
- They are ideal for unskilled operators - Some Maxam owners call them boy proof or goofproof!
- The high inertia rotors keep cutting in peak load situations. This reduces the load on the tractor's drivetrain minimising possible damage to either mower or tractor.

# Maxam mowers are versatile

Mow into rows for silage or precutting for cows

A full spread of conditioned grass for quick wilting

- Maxam Mowers can do all your farm mowing and topping. This includes some tasks that would often be done by a mulcher, such as Kikuyu control.
- If you mow your own baleage you can also spread the grass out using a Wilter Spreader. This saves you having a tedder as well.
- With a Maxam Mower you can adjust the cutting height for topping. You can also leave the grass in rows, which is common when pre-cutting for cows, or spread them out if you are topping after grazing.
- Maxam Mowers are routinely used for a wide range of tasks. From mowing silage, baleage and hay to mowing roadsides, topping nuisance growths or being an integral part of a dairy farmer's pasture management program, the Maxam Mower can do it all.

## Easy pasture management

### Topping

The Maxam Mower is the ultimate topper – never shying away from hard work such as bull rushes and heavy thistles. Rushes and thistles are smashed open so that they decompose quicker. Mowing thistles before it rains can also kill their root structure.

A Maxam Mower can contribute to a healthier and more productive pasture which ultimately makes a farm more profitable.

### Mowing Grass Crops

The Wilter Spreader is unique to Maxam and can wilt grass faster than a Mower Conditioner. The less time that cut grass is left out in the paddock the chance of rain damage is minimised. The grass is spread gets maximum exposure to the sun and breeze, drawing out excess moisture faster. This means that more nutrients are retained in the forage for more metabolisable energy.

The long skids under the cutting drums eliminate scalping and the mower's clean cut ensures quick regrowth. With the Maxam Mower the anticipated strips left by running the tractor wheels over the uncut crop are eliminated in most mowing conditions. This is due to blade speed, wheel positioning and generating an updraft under the rotor.

Great for mowing rushes

# Maxam Mower Models February 2024

## MAXAM 2500IV

The 2500IV is an incredibly versatile mower that will handle all the mowing and topping duties on the farm.

Cutting Width	2.5 m
Overall Transport	2.65 m
Cutting Height	25 - 125 mm
PTO Speed	540 RPM
Tractor size	70 HP+
Weight	550 KG

Notes

## Mower Models

CODE	DESCRIPTION
M2500	MAXAM 2500 IV
M2500W	MAXAM 2500 IV + WILTER
MWTK25	2500 Weight Transfer Kit

## MAXAM 3300V

The Maxam 3300V is an amazingly compact mower for a 3.3m cutting width, which makes it easy and safe to operate even in undulating terrain.

Cutting Width	3.3 m
Overall Transport	3.18 m
Cutting Height	25 - 75 mm
PTO Speed	1000 RPM
Tractor size	80 HP+
Weight	720 KG

MAXAM 3300 requires 1000 PTO input.
